

# Install Foes

1. Before installing a copy of Foes, please view the Installation Git PDF under the Documents then Installation Instruction folder.
2. To get a copy of Foes you will need to “clone the repository”. In layman’s terms you will copy and paste all the documents and code from Git onto your own computer. This will allow you to personalize Foes and make it your own. The following photos are examples to help you and may differ from what see on your screen.
3. Go to the Foes main page and find the green code dropdown button:

4. Click the dropdown and copy the URL by either highlighting the Link or pressing the copy button to the right.

5. For MAC Users:

- a. Open “Terminal” and navigate to the location/folder you want to place your Foes copy.

```
C:\Users\Macy Lu>cd GitFiles  
C:\Users\Macy Lu\GitFiles>|
```

- b. Once you find where you want it, type “git clone” and then paste the URL after it.

```
git clone https://github.com/TAP-GGC/Foe.git
```

- c. Then press enter for the cloning process to start.

```
$ git clone https://github.com/YOUR-USERNAME/YOUR-REPOSITORY  
> Cloning into `Spoon-Knife`...  
> remote: Counting objects: 10, done.  
> remote: Compressing objects: 100% (8/8), done.  
> remove: Total 10 (delta 1), reused 10 (delta 1)  
> Unpacking objects: 100% (10/10), done.
```

6. For Window Users:

- a. Open “Git Bash” or your “Command Prompt” and navigate to the location/folder you want to place your Foes copy.

```
C:\Users\Macy Lu>cd GitFiles  
C:\Users\Macy Lu\GitFiles>|
```

- b. Once you find where you want it, type “git clone” and then paste the URL after it.

```
git clone https://github.com/TAP-GGC/Foe.git
```

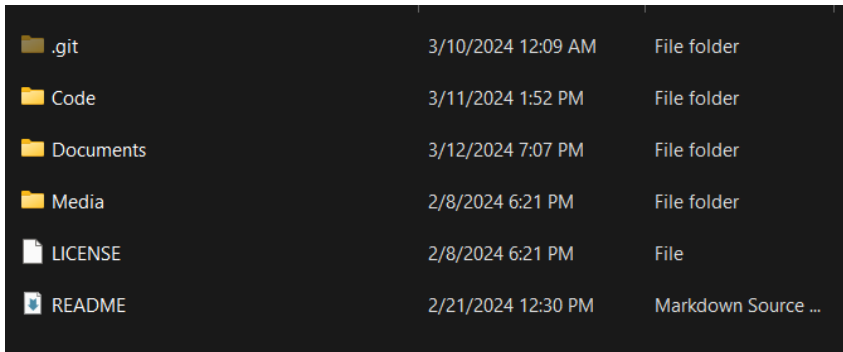

- c. Then press enter for the cloning process to start.

```
$ git clone https://github.com/YOUR-USERNAME/YOUR-REPOSITORY  
> Cloning into `Spoon-Knife`...  
> remote: Counting objects: 10, done.  
> remote: Compressing objects: 100% (8/8), done.  
> remove: Total 10 (delta 1), reused 10 (delta 1)  
> Unpacking objects: 100% (10/10), done.
```

7. Let the cloning process finish. Do not exit or close the window as it can affect your files and once it’s done go to your file explorer/navigator and find the folder where you put Foes.

8. Double click on the folder and you should see different folders. Explore them by clicking on them and their files.

A screenshot of a file explorer window with a dark background. It displays a list of files and folders. Each entry consists of an icon, a name, a date and time, and a file type. The entries are: a folder icon for '.git' (3/10/2024 12:09 AM, File folder), a folder icon for 'Code' (3/11/2024 1:52 PM, File folder), a folder icon for 'Documents' (3/12/2024 7:07 PM, File folder), a folder icon for 'Media' (2/8/2024 6:21 PM, File folder), a document icon for 'LICENSE' (2/8/2024 6:21 PM, File), and a document icon for 'README' (2/21/2024 12:30 PM, Markdown Source ...).

	.git	3/10/2024 12:09 AM	File folder
	Code	3/11/2024 1:52 PM	File folder
	Documents	3/12/2024 7:07 PM	File folder
	Media	2/8/2024 6:21 PM	File folder
	LICENSE	2/8/2024 6:21 PM	File
	README	2/21/2024 12:30 PM	Markdown Source ...

9. Congrats you now have finished cloning your first repo.
